

Assignment: Face Verification System

Objective: Use Pre-trained Siamese Networks (FaceNet) to verify identity.

Part 1: The Code (Practical)

- 1. Install The deepface library (pip install deepface).**
- 2. Collect Data**
 - **Download 2 photos of a famous person (Anchor, Positive).**
 - **Download 1 photo of a different celebrity or famous person (Negative).**
- 3. Verification Task Write a Python script to:**
 - **Compare the two photos of the famous person (Should return "Verified: True").**
 - **Compare the famous person's photo vs. the different celebrity's photo (Should return "Verified: False").**
 - **Print the Distance (Cosine or Euclidean) for both cases.**

Model: Use model_name = 'FaceNet' inside the DeepFace function.
